ATOMX CARBON

OBSESSION FOR LIGHTNESS

Climbing was never so much fun. What used to be a chore is now part of the fun. Incredible traction, power to spare, smooth running and a suspension that always follows the contours of the terrain. Now it's nothing but fun.

The new ATOMX Carbon range combines lightness, an outstanding sporting performance and the most advanced electric technology of ATOMX Carbon, in addition to the new 29" models, the Brose S Mag motor and the new X Display & X Remote for an improved performance.

Its 155 km range also ensures limitless fun.

ATOMX CARBON

MAXIMUN PERFORMANCE

The freedom to create different shapes, as well as the stiffness and lightness of high-modulus carbon, has allowed us to produce a frame that is 2 kg lighter, 50% more rigid and a rear triangle that is 123% more rigid than its aluminium version.

With a front triangle with extreme and aggressive lines, its standover height allows you to ride the bike with ease, thanks to the tilt in the upper tube.

The shape of the down tube ensures adequate fork and wheel clearance for use in Enduro and aggressive Trail cycling.

FAR FAR AWAY

The built-in ATOMX battery has a range of up to 155 km. The battery has a **720 Wh** capacity and is hosted inside the down tube, offering the most compact cross section in the market, thanks to the new 21700 cells, which have the highest energy density in the market, i.e., 5 Ah per cell.

The X System used in ATOMX bikes guarantees a low position of the heavier elements of the system, the motor and battery, to achieve a low centre of gravity that ensures a reactive and stable bike.

155 KM

BROSE S MAG

PROTECTIVE HOUSING THAT INSULATES THE MOTOR

ATOMX e-bikes feature the Brose S Mag motor, which offers an outstanding performance. **It is a very light motor, weighing just 2.9 kg, featuring a compact design and made of magnesium.** Its internal drive belt and clutch ensure the smoothness of the motor and reduce the noise and friction to a minimum when not using assistance.

The Brose S Mag motor maintains a maximum torque of **90 Nm** and has a **maximum cadence of 130 rpm**, achieving its optimum performance at high user cadence rates **(90-120 rpm).**

GEOMETRY AND CONSTRUCTION

SYSTEM

The **optimal arrangement of the electrical components** has allowed us to design the frame of the ATOMX without sacrificing anything in terms of geometries.
The internal cabling is naturally routed through the down tube with a carbon conduit that is specifically designed for feeding through cables. This prevents any pinching or friction and ensures ease of maintenance.
The low position of the heavier parts of the system (motor and battery) provides a low centre of gravity, thus ensuring a **reactive and stable bike.**

SUSPENSION

FULL SUSPENSION TECHNOLOGY

Split Pivot technology consists of a suspension system developed exclusively for BH Bikes and based on the traction, pedalling efficiency, manoeuvrability and rigidity of the bicycle.

This system allows **the three forces to act on the bicycle separately. Pedalling, braking and suspension.**

INTEGRATION

X DISPLAY

It features a 2.8" transflective LCD colour screen to ensure maximum visibility, as well as an Ant+ and Bluetooth connection, also featuring automatic modes based on torque or heart rate.

It also features the same functions of the previous display: range, battery capacity, travel time, speed, distance, power, cadence, time of day, identification of the assistance mode according to the colour, automatic light ON/OFF, throttle function up to 6 km/h, parameterisation of the assistance modes, battery and system diagnostics and micro-USB charging port.

X REMOTE

It has a guard on the end to prevent any friction when you turn the bike. In addition, it features a vibration mode that warns the rider with pre-defined notifications.

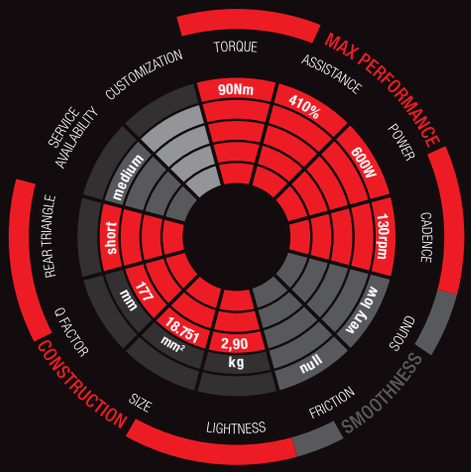
ATOMX CARBON

MOTOR

BROSE S MAG MOTOR

ATOMX Ebikes come with the **Brose S Mag motor, which is compact and has a magnesium construction, reducing its weight by up to 2.9 kg, maintaining a maximum torque of 90 Nm** (90-120rpm).

It also offers **a higher level of configurability,** with the ability to customise assistance modes and acceleration on the display.



In a nutshell, this is an **extremely lightweight and compact motor, 15% lighter** than its predecessor the Brose S Alu motor, with a minimal visual impact and **a low centre of gravity,** which offers no resistance when in no assistance mode.

BROSE S MAG

POWERFULL HIGH PERFORMANCE

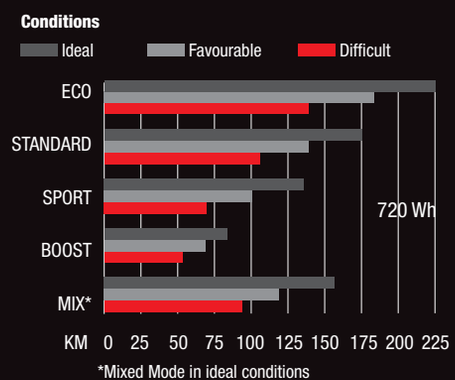
Levels of Assistance

Eco: 75%
Eco+: 150%
Sport: 250%
Boost: 410%

BATTERY

155 KM RANGE

This allows the ATOM battery to achieve a total capacity of **720 Wh** contained in a compact down tube design, providing **the potential for 155 km of range.**
The e**xternal charging port** is **located conveniently on the upper section of the battery and is easily accessible to the user.**



SECURITY SMART KEY BRACELET

Each user will have a stylish **smart key wristband** that will allow them **to remove** the battery, so that they can charge it without needing a key.

AUTOMATIC CARE SYSTEM

The integrated batteries i**ncorporate a high performance BMS (Battery Management System) offering a very controlled consumption and lengthening the useful life of the battery** in the case of not being used for long periods.

UPGRADE KIT

BOTTLE CAGE AND MAGNETIC BOTTLE

500 ml.

Exclusive design on the bottom part of the upper tube. The upper tube is held in place by a magnetic bracket.
Easy to insert and remove.

It is part of the BH Unique customisation programme

ATOMX

obsession

The line between climbs and descents is becoming blurred. Your new routes are no longer measured in kilometres, they're now measured in enjoyment. A feeling of unlimited power that will put a smile on your face every time you overcome an obstacle.

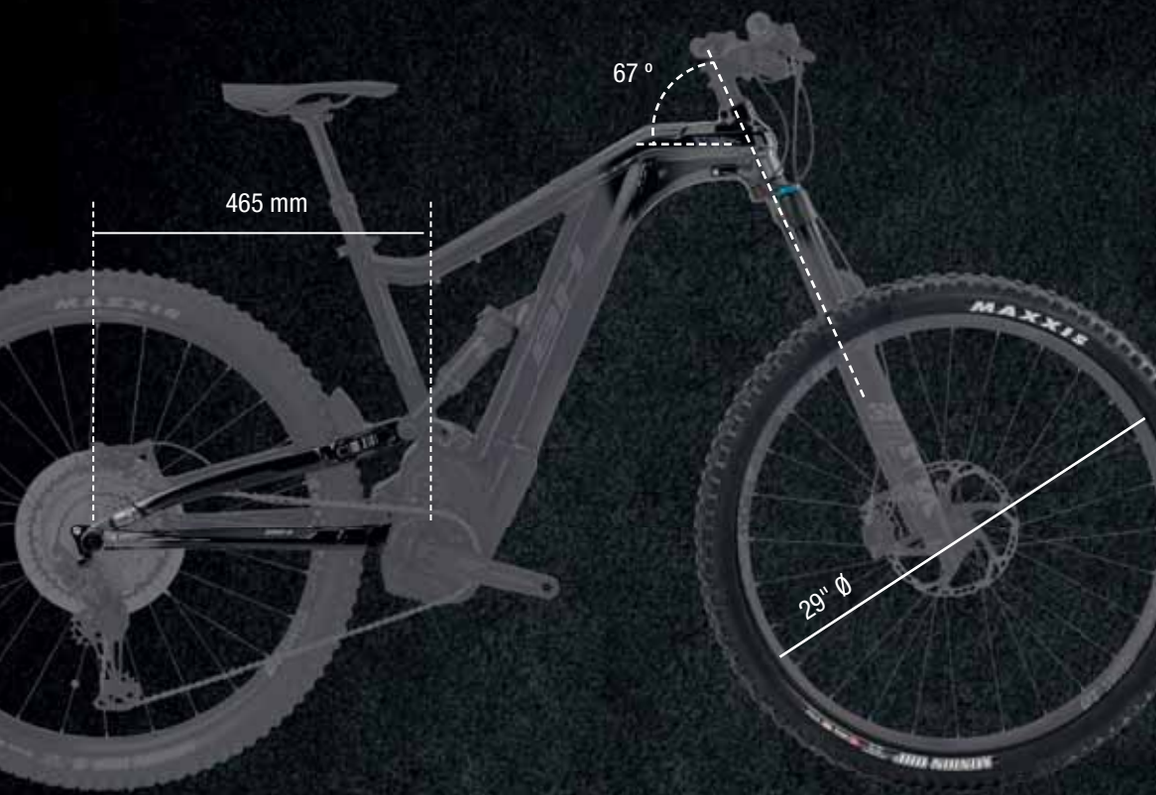
The ATOMX eMTB has been designed for enjoyment, whatever the terrain.

160 mm and 140 mm of travel and a geometry that gives the rider a comfortable position, providing the necessary stability and control on descents and technical terrains.

Its 155 km range also ensures limitless fun.

FAR AWAY

ATOMX



MAXIMUN PERFORMANCE

With a front triangle with extreme and aggressive lines, its standover height allows you to ride the bike with ease, thanks to the tilt in the upper tube.

The shape of the down tube ensures adequate fork and wheel clearance for use in Enduro and aggressive Trail cycling. In addition, it provides maximum stiffness, thanks to its triple extrusion and with no cutting or CNC processing that alters or reduces its properties.

Its rear triangle of just 465 mm and its 67º steering angle improve the rider's position and performance while riding, for improved downhill handling and providing the e-bike with excellent stability on technical terrains.

FAR FAR AWAY

The built-in ATOMX battery has a range of up to 155 km. The battery has a **720 Wh** capacity and is hosted inside the down tube, offering the most compact cross section in the market, thanks to the new 21700 cells, which have the highest energy density in the market, i.e., 5 Ah per cell.

The X System used in ATOMX bikes guarantees a low position of the heavier elements of the system, the motor and battery, to achieve a low centre of gravity that ensures a reactive and stable bike.

155 KM

BROSE S MAG TECHNOLOGY

PROTECTIVE HOUSING THAT INSULATES THE MOTOR

ATOMX e-bikes feature the Brose S Mag motor, which offers an outstanding performance. **It is a very light motor, weighing just 2.9 kg, featuring a compact design and made of magnesium.** Its internal drive belt and clutch ensure the smoothness of the motor and reduce the noise and friction to a minimum when not using assistance.

The Brose S Mag motor maintains a maximum torque of **90 Nm** and has a **maximum cadence of 130 rpm**, achieving its optimum performance at high user cadence rates **(90-120 rpm).**

GEOMETRY AND CONSTRUCTION

SYSTEM

The **optimal arrangement of the electrical components** has allowed us to design the frame of the ATOMX without sacrificing anything in terms of geometries.
The internal cabling is naturally routed through the down tube with a carbon conduit that is specifically designed for feeding through cables. This prevents any pinching or friction and ensures ease of maintenance.
The low position of the heavier parts of the system (motor and battery) provides a low centre of gravity, thus ensuring a **reactive and stable bike.**

XTEP

A NEW FUTURE

On your way down you'll get a surprise. A real feeling of an enduro bike. Confidence and composure on the most technical and quickest stretches. Agility on slow stretches. Now you'll want to ride your bike more than ever before, dare to tackle the climbs that you used to avoid and take on descents that used to seem unthinkable. Your desire for adventure is now your only limit.

The Xtep Ebikes have the same shapes as the ATOMX range; its "X System", a front triangle with aggressive lines and a low standover that allows you to move quickly on the bike.

155 km range with maximum performance.

HIGH PERFORMANCE

HIGH PERFORMANCE

With a front triangle with extreme and aggressive lines, its standover height allows you to ride the bike with ease, thanks to the tilt in the upper tube.

The shape of the down tube ensures adequate fork and wheel clearance for use in Enduro and aggressive Trail cycling. In addition, it provides maximum stiffness, thanks to its triple extrusion and with no cutting or CNC processing that alters or reduces its properties.

A RANGE OF UP TO 155 KM

The built-in XTEP battery has a range of up to 155 km. The battery has a **720 Wh** capacity and is hosted inside the down tube, offering the most compact cross section in the market, thanks to the new 21700 cells, which have the highest energy density in the market, i.e., 5 Ah per cell.

The X System used in ATOMX bikes guarantees a low position of the heavier elements of the system, the motor and battery, to achieve a low centre of gravity that ensures a reactive and stable bike.

SHIMANO MOTOR EP8

Very light, weighing just 2.5 kg, incredibly quiet, ensuring low aerodynamic resistance during riding (low drag), improved by 50% compared to its previous version (E8000).

It has a **maximum cadence of 130 rpm**, with its optimal operating point being at high user cadences (90-120 rpm). Its maximum torque of 85 Nm is maintained during long climbs, without the risk of it heating up. It has an optimal **Q-Factor of 175 mm.**

GEOMETRY AND CONSTRUCTION

SYSTEM

The internal cabling is naturally routed through the down tube with a carbon conduit that is specifically designed for feeding through cables. This prevents any pinching or friction and ensures ease of maintenance.
The low position of the heavier parts of the system (motor and battery) provides a low centre of gravity, thus ensuring a **reactive and stable bike.**

SUSPENSION

FULL SUSPENSION TECHNOLOGY

The unique design of the suspension maintains its structural stiffness and enables the bike to be used without assistance performing equal to a conventional bike.

Split Pivot technology consists of a suspension system with floating shock absorption, developed exclusively for BH Bikes and based on the traction, pedalling efficiency, manoeuvrability and rigidity of the bicycle.

NEW SPLIT PIVOT DESIGN

It has been redesigned with more compact dropouts and stiffer inserts for more precise gear changing.

INTEGRATION

EM8000 DISPLAY

The EM8000 display is designed exclusively for e-MTBs. Compact and customisable, it can have different profiles and adjust to a wide variety of handlebars and cables. It permits Wi-Fi connection.

Its compact screen that is easy to read incorporates dynamic images when changing assistance level.

MOTOR

SHIMANO MOTOR

The Xtep features the new Shimano EP8 motor, which means: A natural ride, supporting the rider on climbs and helping them to control the bike on descents.

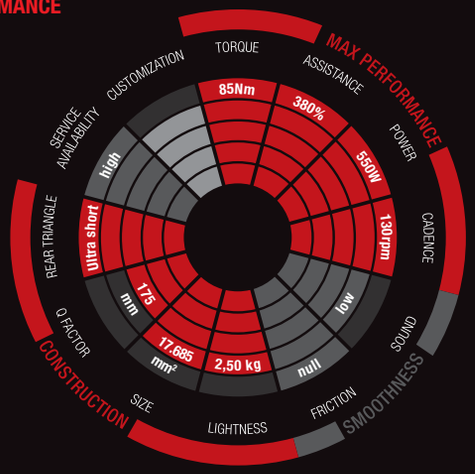
It is designed with low magnetic resistance (low drag) and the power is maintained for prolonged periods on climbs and at an optimal operating point on high cadences (90-120 rpm). In short, it's you at 400%.

APP E-TUBE

Adjust the assistance levels and power of your Xtep via Bluetooth. And create different profiles to adapt your eMTB to the route you are taking.

SHIMANO EP8

POWERFULL HIGH PERFORMANCE



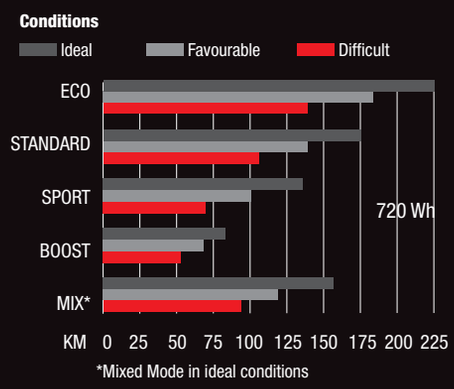
Levels of Assistance

Eco: 50%
Trail: 200%
Boost: 380%

BATTERY

155 KM RANGE

This allows the ATOM battery to achieve a total capacity of **720 Wh** contained in a compact down tube design, providing **the potential for 155 km of range.**
The e**xternal charging port** is **located conveniently on the upper section of the battery and is easily accessible to the user.**



SMART KEY BRACELET

Each user will have a stylish **smart key wristband** that will allow them **to remove** the battery, so that they can charge it without needing a key.

AUTOMATIC CARE SYSTEM

The integrated batteries i**ncorporate a high performance BMS (Battery Management System) offering a very controlled consumption and lengthening the useful life of the battery** in the case of not being used for long periods.

UPGRADE KIT

BOTTLE CAGE AND MAGNETIC BOTTLE

500 ml.

Exclusive design on the bottom part of the upper tube. The upper tube is held in place by a magnetic bracket.
Easy to insert and remove.

ATOMS

EVOLUTION

The R&D team has revamped the design of our AtomS frames to develop a range of e-bikes with a geometry that has a low down tube without sacrificing anything in the Urban range, a stiffer lower tube and featuring a new range of SUV models with top-of-the-range peripherals.

The Full Suspension models feature the Split Pivot suspension system.

The 2021 range includes the X Display Lite and X Remote in all models, and they have a range of 155 km.

ATOMS

SUV RANGE

The AtomS urban bikes include an SUV range with top-of-the-range peripherals and models with a geometry that has a low down tube for easy access.

It offers the cyclist an ergonomic and comfortable position when riding.

BROSE S & C MAG

The Brose S Mag motor maintains a maximum torque of **90 Nm** and has a **maximum cadence of 130 rpm**, achieving its optimum performance at high user cadence rates **(90-120 rpm).**

The **motor** Brose C Mag is integrated into the frame with minimal visual impact and **a low centre of gravity. It also enables the use of a conventional groupset** –double chainring or internal gear hub– **and offers no resistance in «no assistance» mode.**

As a new feature, the motor is protected by two side housings with an insulated and hermetic seal.

A RANGE OF UP TO 155 KM

The built-in AtomS battery has a range of **up to 155 km.** The battery has a **720 Wh** capacity and is hosted inside the down tube, offering the most compact cross section in the market, thanks to the new 21700 cells, which have the highest energy density in the market, i.e., 5 Ah per cell.

GEOMETRY AND CONSTRUCTION

"TS SYSTEM"

The BH AtomS range **incorporates the BH patented system, Turn & Slide "TS System", with a simple and minimalist integration of the battery in the diagonal tube, at the top,** enabling the design and aesthetics of a conventional frame.

Access to the battery through the top of the diagonal tube provides **great ergonomics for the user when it comes to handling it. The internal wiring is channelled along the diagonal tube through inner tubes specifically developed in the frame extrusion.**

The relative position of the less lightweight parts of the system (motor and battery) enables a **low centre of gravity, guaranteeing a reactive and stable bike, and without any sacrifices in terms of geometries.**

INTEGRATION

X DISPLAY LITE

The X Display Lite is located in the inner section of the handlebars, to ensure that it is fully protected.

It has a **transflective LCD** colour screen to ensure maximum visibility.

X REMOTE

The X Remote control **has been optimised with protection at the end to prevent any friction when turning the bike.**

MOTOR

BROSE S & C MAG MOTOR

BROSE S Mag

ATOM Ebikes come with the **Brose S Mag motor, which is compact and has a magnesium construction, reducing its weight by up to 2.9 kg, maintaining a maximum torque of 90 Nm** (90-120rpm).

It also offers **a higher level of configurability,** with the ability to customise assistance modes and acceleration on the display.

BROSE C Mag

Lightweight and compact, it weighs just 2.9 kg thanks to magnesium being used to manufacture its housing.

Is also 15% smaller than the Brose C Alu motor. It has a lateral surface of 18,750mm² and an optimal Q factor of 177 mm.

It has a maximum flat torque of 50 Nm across the user's entire cadence range. And it develops torque up to a maximum cadence of 130 rpm, with its optimal operating point being at high user cadences (90-120 rpm).

BROSE S MAG

POWERFULL HIGH PERFORMANCE

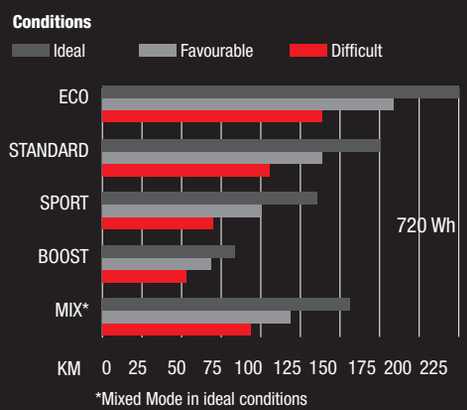
BATTERY

155 KM RANGE



*Mixed Mode in ideal conditions

This allows the ATOM battery to achieve a total capacity of **720 Wh** contained in a compact down tube design, providing **the potential for 155 km of range.**
The battery can be charged directly from a port that is built into the frame or from the battery itself, allowing fast charging to 80% capacity in 1.5 hours.

AUTOMATIC CARE SYSTEM

The integrated batteries i**ncorporate a high performance BMS (Battery Management System) offering a very controlled consumption and lengthening the useful life of the battery** in the case of not being used for long periods.

UPGRADE KIT

BH BIKES LOCATOR APP + GPS TRACKER MODULE

Supplied from the main battery. The optional app BH Bikes Locator unit kit is the **perfect anti-theft system. It allows the user to locate the bicycle at any time.** Its seamless integration into the bicycle means that it can only be accessed by the user and, because it is controlled using the web and **premium applications and app BH Bikes Locator, it is easy to configure.**

WINTER COVER FOR BATTERY

Maintaining battery heat, **increasing performance up to 15% more of autonomy in extreme circumstances.**

LIGHTS KIT

The optional lights kit allows **connecting standard 6V lights to the system**, controlling them from the screen (or Premium application).

ATOM

THE BEGINNING

Atom bikes are characterised by their "TS System" patented by BH Bikes, which integrates the battery in the diagonal tube, enabling the shape of a traditional frame. Its optimised design offers a compact geometry characteristic of BH frames.

The 2021 range includes the X Display Lite and X Remote in all models.

TS SYSTEM

ATOM

LOW DOWN TUBE

Atom urban bikes have a geometry with a low down tube for easy access.
It offers the cyclist an ergonomic and comfortable position when riding.

FULL SUSPENSION TECHNOLOGY

Split Pivot: This system allows **the three forces to act on the bicycle separately. Pedalling, braking and suspension.**

A RANGE OF UP TO 155 KM

There **are 2 types of batteries, 720 Wh for the Pro range, 500 Wh for the Standard range.** Offering long ranges of up to 155 km in the Pro range, by incorporating 4.2 Ah high-density cells; 105 km in the Standard range.

GEOMETRY AND CONSTRUCTION

"TS SYSTEM"

The BH Atom range **incorporates the BH patented system, Turn & Slide "TS System", with a simple and minimalist integration of the battery in the diagonal tube, at the top,** enabling the design and aesthetics of a conventional frame.

Access to the battery through the top of the diagonal tube provides **great ergonomics for the user when it comes to handling it. The internal wiring is channelled along the diagonal tube through inner tubes specifically developed in the frame extrusion.**

The relative position of the less lightweight parts of the system (motor and battery) enables a **low centre of gravity, guaranteeing a reactive and stable bike, and without any sacrifices in terms of geometries.**

SUSPENSION

SPLIT PIVOT TECHNOLOGY

Atom double suspension Ebikess incorporate technology patentd by BH Bikes: Split Pivot.

Split Pivot technology consists of **a suspension system with floating shock absorption, developed exclusively for BH Bikes and based on the traction, pedalling efficiency, manoeuvrability and rigidity of the bicycle**.

INTEGRATION

X DISPLAY LITE

The X Display Lite is located in the inner section of the handlebars, to ensure that it is fully protected.

It has a **transflective LCD** colour screen to ensure maximum visibility.

X REMOTE

The X Remote control **has been optimised with protection at the end to prevent any friction when turning the bike.**

ATOM

MOTOR

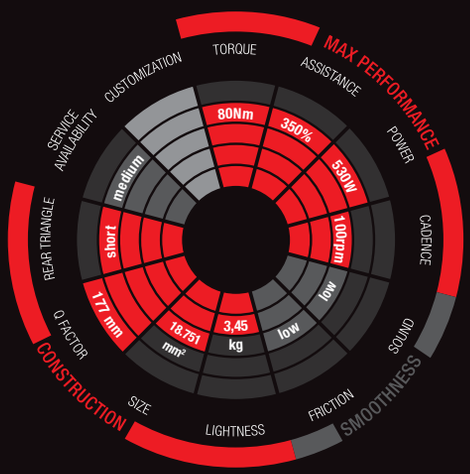
BH DRIVE 1E 36 V MOTOR

The **Atom** range incorporates a new triple sensor **BH Drive-1E 36 V motor**, **more compact and lightweight for high performance and maximum power for sports use**, with great response behaviour. It has an **efficiency of between 70% and 83%** depending on the speed, and a **maximum torque of 80 Nm limited to 25 km/h.**

BH 1E-36V

ECONOMIC HIGH PERFORMANCE

Levels of Assistance
Eco: 1:0.9 Sport: 1:2.7
Eco+: 1:1.8 Boost: 1:3.5



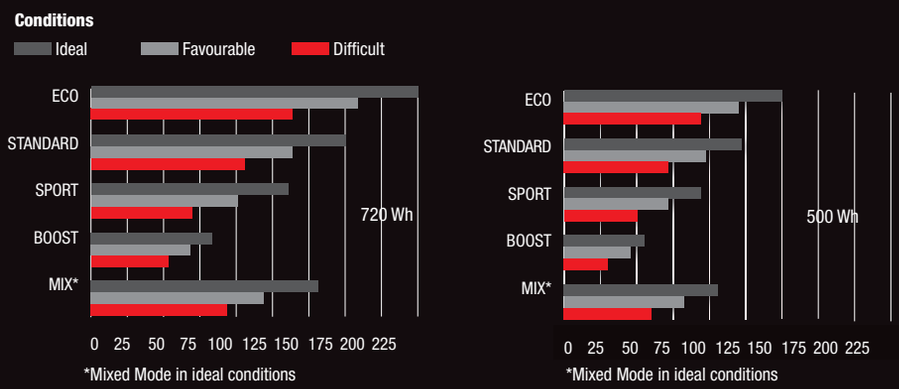
Atom MTB

BATTERY

155 KM RANGE

The **charging port** is located **on one side of the diagonal tube** and allows it to be **charged either without having to remove the battery, or from the battery itself.**

There are **2 types of batteries, 720 Wh for the Pro range, 500 Wh for the Standard range.** Offering **long ranges of up to 155 km in the Pro range,** by incorporating **4.2 Ah high-density cells; 105 km in the Standard range.**



AUTOMATIC CARE SYSTEM

The integrated batteries **incorporate a high performance BMS (Battery Management System) offering a very controlled consumption and lengthening the useful life of the battery** in the case of not being used for long periods.

UPGRADE KIT

BH BIKES LOCATOR APP + GPS TRACKER MODULE

Supplied from the main battery. The optional app BH Bikes Locator unit kit is the **perfect anti-theft system. It allows the user to locate the bicycle at any time.** Its seamless integration into the bicycle means that it can only be accessed by the user and, because it is controlled using the web and **premium applications and app BH Bikes Locator, it is easy to configure.**

WINTER COVER FOR BATTERY

Maintaining battery heat, **increasing performance up to 15% more of autonomy in extreme circumstances.**

LIGHTS KIT

The optional lights kit allows **connecting standard 6V lights to the system**, controlling them from the screen (or Premium application).

CORE

UNLIMITED CYCLING

Roads and paths are always our faithful companions for adventures and scrapes.
Could we call what we feel love? Love and passion.

A harmonious passion. Always together — dealing with the same harsh weather, sharing the cold from the rain and the heat from our exertion. Mile after mile, until we reach the finish line.
A finish line that is sometimes expected and sometimes not.

But ...what if we don't finish those roads? And if we were always able to go that extra mile?

220 km of cycling. 220 km of adventure.
220 km of e-cycling.

220

CORE

MOTOR

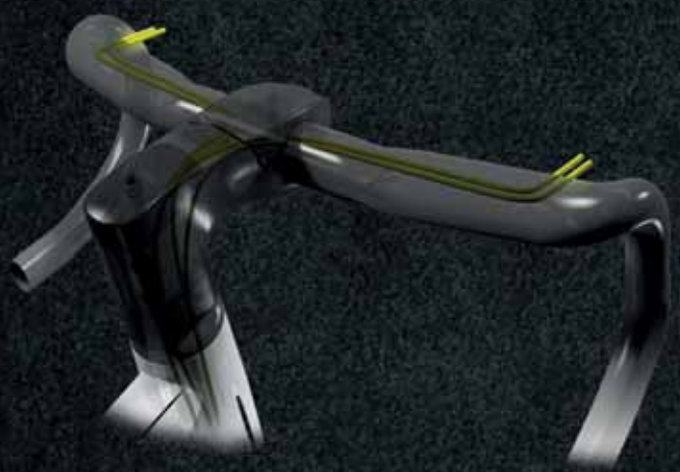
LIGHTWEIGHT, COMPACT, POWERFUL AND VERY VERY QUIET

The motor of Core e-bikes is characterised by being extremely quiet, compact, lightweight and powerful. It is integrated into the frame with a minimal visual impact and **a low centre of gravity and it is protected by two side housings to ensure an insulated and hermetic seal.**

It only weights 2.2 kg and enables the use of conventional – single plate, double chainring or internal gear hub– **and it does not generate any friction in non-assistance mode, allowing the user to use it at speeds above 25 km/h without any additional effort.**

The motor delivers 250 W of power and generates a maximum torque of 65 Nm.

INTERNAL CABLING



NO CABLES

The road and gravel bike range features the ACR system, thus ensuring 100% internal cabling.

CORE DISPLAY

CORE HEART

The Core display is fully integrated into the stem and it features a button that allows you to increase or reduce the assistance level, through an LED colour system.

Additionally, the display shows the user the charge level left in the battery in a simple and visual way and it features LED colour lights for the different modes.

BH has developed the Core App (IOS and Android) that allows you to connect your smartphone to the bike's Core system via Bluetooth. Among other options, the Core App allows the user to switch between the motor's assistance modes whenever they like.

GEOMETRY AND CONSTRUCTION

The Core system features a "non-removable" battery that is fully integrated into the down tube, with the aesthetics of a conventional bike.

This fact reduces the frame's weight, as it simplifies its construction.

The internal wiring runs along the down tube, through inner tubes specifically developed during extrusion.

CORE MTB ON 29"

The 2021 range includes two rigid Core models on 29" which maintain the essence of our Core bikes: their range and their low weight.

INTEGRATION

ACR STEERING

The new Core frame features the ACR system, which enables 100% internal cabling.

CORE DISPLAY ROAD AND GRAVEL

The displays of the road and gravel bikes are fully integrated into the stem and they feature LED lights with different colours for each mode.

A central button allows easy and intuitive assistance.

CORE APP Road and Gravel

The Core App, developed for IOS and Android, allows you to modify the LED colours of the display and parameterise the assistance modes.

X DISPLAY CORE MTB

The X Display is located in the inner section of the handlebars, to ensure that it is fully protected.

It has a **transflective LCD** colour screen to ensure maximum visibility and it has an **Ant+ connection and Bluetooth.**

- **X Remote**

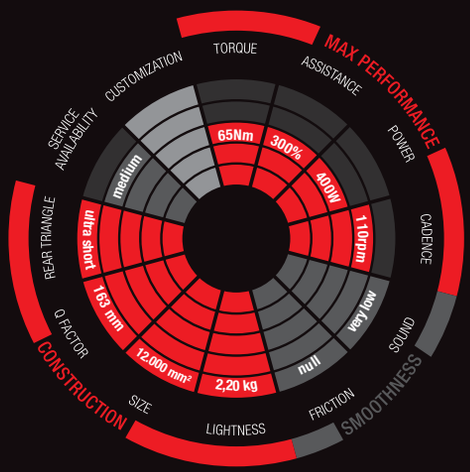
The X Remote control **has been optimised with protection at the end to prevent any friction when turning the bike.**

CORE

MOTOR

BH 2ESMAG

ECONOMIC HIGH PERFORMANCE



QUIET CENTRAL MOTOR

The BH ESMAG motor is made entirely from magnesium , making it 300 g lighter than its predecessor.

The **motor is 2.2 kg,** is integrated into the frame with minimal visual impact and **a low centre of gravity. It also enables the use of a conventional groupset** –double chainring or internal gear hub– **and offers no resistance in «no assistance» mode.**

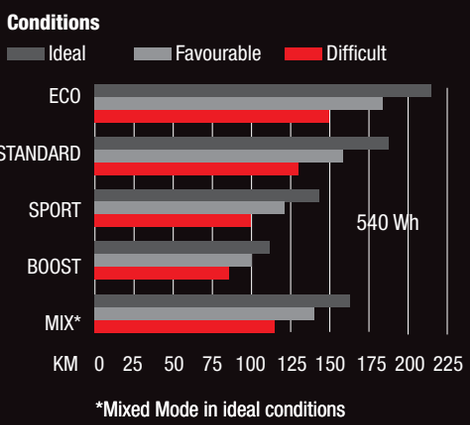
Levels of Assistance

Eco: 1:0.75	Sport: 1:2.25
Eco+: 1:1.50	Boost: 1:3.00

BATTERY

165 KM RANGE

The down tube houses **a 540 Wh battery** which can last for up to 165 km.



*Mixed Mode in ideal conditions

AUTOMATIC CARE SYSTEM

The integrated batteries **incorporate a high performance BMS (Battery Management System) offering a very controlled consumption and lengthening the useful life of the battery** in the case of not being used for long periods.

ADDITIONAL XPRO BATTERY

PLUG AND RIDE

This adds 180 Wh of capacity, meaning a total of 720 Wh and a range of up to 220 km.

It works **as a Plug & Ride mechanism; simple to use and no need to connect cables.**

The bottle holder connector for the XPro battery **is completely waterproof and designed to work with the XPro battery or as a bottle holder for any conventional bottle.**

LYNX 5

AGGRESSIVE TRAIL

The Lynx 5 is the new trail bike from BH. With its 130 mm travel, it is a fast bike with high pedalling efficiency, whereby the Split Pivot suspension system with floating shock absorption guarantees the perfect kinematics for trail and aggressive trail use.

LYNX 5

AGGRESSIVE TRAIL

GEOMETRY AND CONSTRUCTION

B-CL BALLISTIC CARBON LAYUP

High module fibres developed for All-Mountain use

The Lynx 5 frame, weighing 2,200 g in M size, is built of B-CL Ballistic Carbon Layup carbon fibres, which incorporates high module fibres with high resistance, developed to withstand stresses during descents.

ADVANCED STEERING ANGLE 66º

And a rear triangle of 430 mm to improve position, performance and handling

Geometries that are more aggressive were designed by means of a more advanced (66º).
steering angle, greater reach and a more compact (430 mm) rear triangle. All these elements provide the cyclist with a better position during the ride, improving performance and facilitating better handling during the descents.

PRESS FIT 92

Press Fit 92 for maximum rigidity and minimum bending

Its development, completely integrated into the frame, guarantees maximum rigidity and precision in gear changes. The rear brake support is Direct Post Mount with false thread to ease its adjustment and reliability.

ENDURO BEARINGS

All the pivots turn on high quality Enduro Bearings, specifically developed to support large workloads and low bearing speed.

BOOST 148

And a 12 mm thru axle

It includes the new Boost 148 hub standard that together with the 12mm thru axle increases wheel rigidness and lateral rigidness by 20% and allows compatibility with 27.5"+ wheels.

SPLIT PIVOT TECHNOLOGY

This system allows for separate action on three forces produced on the bicycle: pedalling, braking and suspension.

The result is maximum pedalling efficiency with consistent and progressive suspension.

LYNX RACE RC

LEADERSHIP

100 mm of travel designed to achieve a winning frame for World Cups with the BH Templo Cafés. team.

An agile, lightweight and top-performing bike that competes in the XC World Cup. Its Split Pivot system guarantees maximum pedalling efficiency with a suspension system that works constantly and progressively.

LYNX RACE

LYNX RACE RC

This frame has been designed jointly with our MTB Pro cycling team. With the objective of obtaining a XC-Marathon competition frame to obtain maximum performance.

The Lynx Range RC frame was built using HCIM Hollow Core Internal Moulding applied in BH Bikes to High performance road racing frames. This technology has allowed reducing the weight of the frame.

GEOMETRY AND CONSTRUCTION

PERFORMANCE CARBON LAYUP P-CL

Manufacture with P-CL carbon serves to achieve a frame of just 2,150 grams in the medium size, used in the Lynx Race RC models.

* In size M, ± 5% weight variation.

ADVANCED STEERING ANGLE 68.5º

Geometries that are more aggressive were designed by means of a more advanced (68.5º) steering angle, greater reach and a more compact (426mm) rear triangle.

All these elements provide the cyclist with a better position during the ride improving performance and facilitating better handling during the descents.

PRESS FIT 92

Press Fit 92 for maximum rigidity and minimum bending

Its development, completely integrated into the frame, guarantees maximum rigidity and precision in gear changes. The rear brake support is Direct Post Mount with false thread to ease its adjustment and reliability.

BOOST 148

And a 12 mm thru axle

It includes the new Boost 148 hub standard that together with the 12mm thru axle increases wheel rigidness and lateral rigidness by 20% and allows compatibility with 27.5"+ wheels.

SUSPENSION

SPLIT PIVOT TECHNOLOGY

This system allows for separate action on three forces produced on the bicycle: pedalling, braking and suspension.

The result is maximum pedalling efficiency with consistent and progressive suspension.

INTEGRATION

ENDURO BEARINGS

All the pivots turn on high quality Enduro Bearings, specifically developed to support large workloads and low bearing speed.

It is part of the BH Unique customisation programme

ULTIMATE

THE LIGHTEST

You are at your fastest. At your most aggressive when pedalling. At your most explosive. Each pedal stroke is converted into pure speed. Nothing gets between your power and the ground. As you exit every bend, you feel like standing on the pedals.

The aim of the R&D team involved in the complete redesign of the new XC Ultimate EVO bike was to improve what has been one of the top frames for competitions for years due to its geometry and performance in World Cups.

ULTIMATE EVO
CARBON

ULTIMATE EVO

The Ultimate Evo is an ultra-light bicycle, with a reach that grows between 10 and 20 mm according to the sizes and a steering angle of 68º. These new developments allow us to improve the balance of the bike/rider ensemble. The result is a bike that is even more manageable on descents and in the most demanding areas.

Thanks to its 420 mm chainstays, the rider can ride at 100% without losing energy and achieving greater agility. We have increased the stiffness by 8% on the bottom bracket and the steering.

GEOMETRY AND CONSTRUCTION

EVO CARBON LAYUP E-CL (TORAY T1100 AND T800) HIGH-MODULUS CARBON FIBRE

With the aim of achieving a lighter frame, we are using the best fibres and our exclusive moulding. A higher percentage of Toray T1100G fibres is the key for achieving a weight of 830 g in size MD, in turn improving the stiffness of the bottom bracket box and the steering tube by 8% compared to the previous Ultimate EVO.

Meticulous work in the "layup" has meant better comfort on the seat stays and seat post, increasing the vibration and impact filtration capacity.

Ultimate Evo vs NEW Ultimate EVO
Stiffness and weight comparison

HOLLOW CORE INTERNAL MOLDING-HCIM TECHNOLOGY

The special layout of the carbon, the Evo Carbon Layup high module carbon fibres, the resin and the high pressure applied to the inside of the mould prevents inconsistent pressures and flaws, allowing us to build a more lightweight and rigid bike with the best overall performance.

BLOCKLOCK STEERING SYSTEM BY ACROS

The Ultimate Evo range features the BlockLock system by Acros, which has a limited turn of 150º for protecting the down tube and preventing an impact on the carbon.

INTEGRATION

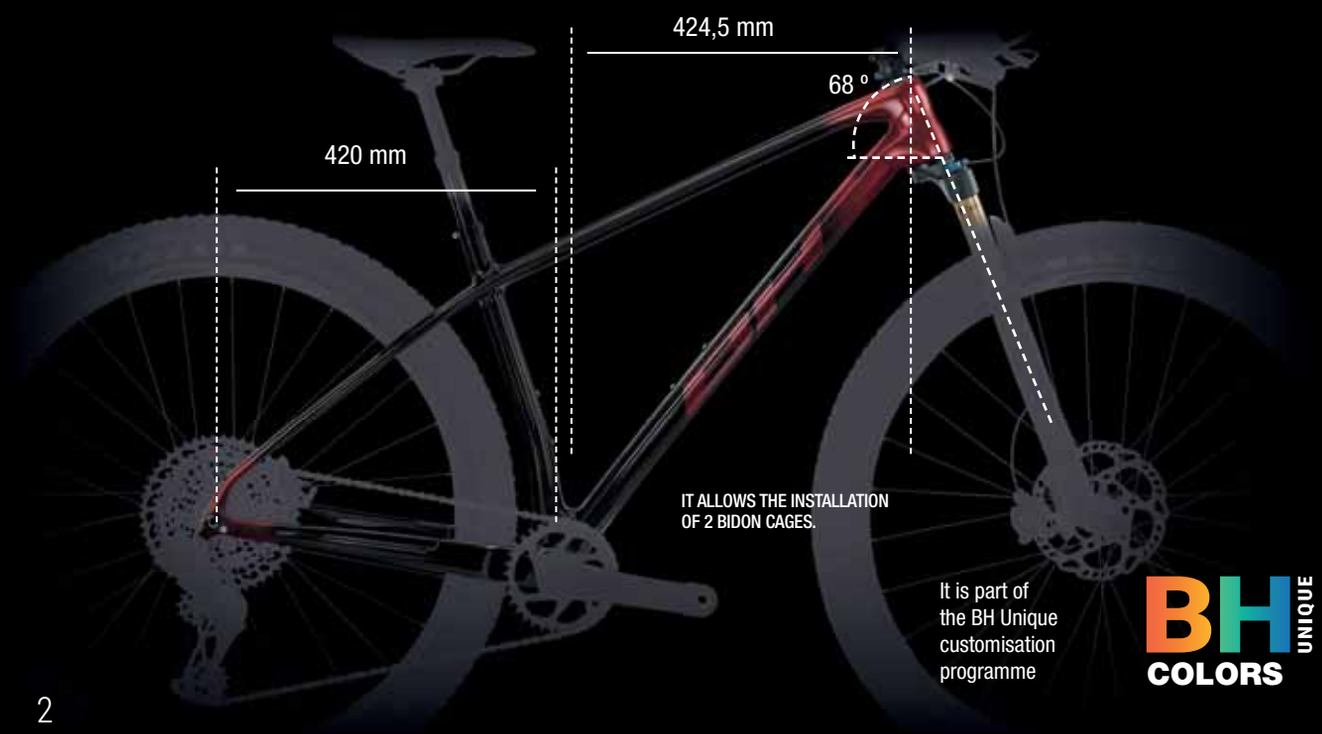
NEW FLAT MOUNT REAR BRAKE

Just like in the road range, the internal cable routing is used for protecting the cable, keeping them clean which gives the frame cleaner lines. It also avoids the use of a sleeve that increases the overall weight of the frame.

DIRECT MOUNT WITH DETACHABLE SCREW FOR BETTER ADJUSTMENT

92 mm Press Fit bottom bracket for maximum rigidity and minimum bending

It is completely integrated into the frame to provide greater rigidity and precision when changing gears. The rear brake Direct Mount support has a detachable screw for better adjustment and reliability.



It is part of the BH Unique customisation programme

ULTIMATE RC

ADN ULTIMATE

Nothing comes close to the feeling you get from rigid bikes. The fact that they have survived the passage of time and the development of countless categories of bikes shows that they have a unique and special identity.

The new Ultimate RC shares shapes and geometry with our Ultimate Evo, a bike that has always been a reference for its performance, geometry and design at the World Cup.

ULTIMATE RC

The key areas in the development of the new Ultimate RC are the same as when we developed the Ultimate Evo: low weight, a 20 mm increase in reach, very short rear chainstays - 420 mm - and a 68º steering angle.

The goal was to create a bike that would achieve optimal balance with the rider, that was even more manoeuvrable on climbs and that would enhance its performance during descents and on more technically challenging terrains.

GEOMETRY AND CONSTRUCTION

PERFORMANCE CARBON LAYUP

The Ultimate RC frame was built by applying the moulding technique used in top-of-the-range road frames. The special arrangement of the carbon, resin and high pressure applied to the inside of the mould prevent pressure variations and imperfections, essential in the construction of a lighter, more rigid bike with better overall performance.

OUTSTANDING AGILITY

Its ultracompact chainstays, only 420 mm, ensure agility and stunning acceleration. The perfect combination of stability on descents and reactivity on climbs.

It also features a dropout with a similar appearance to the BH road bikes, more solid and compact, which reduces the width of the rear chainstays by 2 cm.And it gives the frame's new lines a stylish and sleek appearance.

MAXIMUM STIFFNESS

The design of the Press Fit92 bottom bracket box has allowed us to widen the diagonal tubes to provide maximum stiffness and minimal bending between the front and rear triangles.

This guarantees strength in this key area, where the pedalling forces are directly applied. It is completely integrated into the frame to provide greater rigidity and precision when changing gears.

FLAT MOUNT TECHNOLOGY

The BH Ultimate RC features countless little details. It comes with a bracket for the Flat Mount brake clamp, to help ensure a light weight and the best possible integration .

Despite its minimalist design, the frame has been designed to comfortably withstand the stress produced by the rear brake.

BLOCKLOCK BY ACROS

One notable feature is the addition of the Blocklock steering system by Acros, **which restricts the turning angle of the handlebars to 150º**. No more hitting the upper tube with the handlebars!

BOOST 148X12

The 12 mm thru-axle increases lateral stiffness and wheel stiffness by 20%

It is part of the BH Unique customisation programme

EXPERT

XC SENSATIONS

In our BH mountain bikes, we have focused all of the commitment and work of our experts on the areas of MTB geometry, suspension and performance

EXPERT

The new Expert shares its design and lines with the Ultimate RC. Advanced steering angle, short stays and a longer upper tube. Perfect for XC techniques during descents and fast and efficient pedalling.

GEOMETRY AND CONSTRUCTION

EXTRA RIGIDITY AND HIGH LEVEL OF COMFORT AT JUST 1600 G

Hydroforming technology allows BH to design attractive frames with high resistance and lightness coefficients while maintaining the maximum quality standards demanded by the brand in all of its models

Thus, the design of the Expert frames combines an extra stiffness in the lower part with a high level of comfort and flexibility in the upper tubes. This offers a great capacity for vertical absorption as well as lending additional lateral stiffness to the frame.

All that with the lightweight of 6061 aluminium tubing.

EVO BRAKE MOUNT

With an optimal slope angle to minimise braking vibration

The pods have been designed with a more specific curve and design to house the EVO Brake Mount that reduces the braking vibrations and increases the capacity of the braking system. It has been validated by the FEA (Finite Elements Analysis). All that has produced a 100% optimised frame.

BOOST 148

And a 12 mm thru axle

It is equipped with the new standard Boost 148 bushings, which increase wheel and lateral rigidity by 20% and is compatible with the 27.5+.

INTEGRATION

INTEGRATED CONICAL STEERING TUBE WITH INTERNAL CABLING AT THE FRONT

Steering tube moulded in the same way as the bottom bracket and the rear dropouts. For greater reliability and lightness.

SPIKE

THE BEGINNING

I love cycling. I love to go out on my mountain bike. Mountains, but also tracks and sections of road. A bike for mixed use that is resistant, agile and multipurpose. Do you identify with this description? Then our range of sport mountain bikes is for you. Your new travel and cycling trip companion is waiting for you.

SPIKE

The design of the new Spike features the same geometry as the frame of BH Bikes's XC and Expert bikes. Advanced steering angle, short chainstays and a lengthened upper tube. Perfect for an XC that is technical on the descents and fast and effective when pedalling.

GEOMETRY AND CONSTRUCTION

EVO BRAKE MOUNT

With an optimal slope angle to minimise braking vibration

The pods have been designed with a more specific curve and design to house the EVO Brake Mount that reduces the braking vibrations.

GEOMETRY. EXPERT-INSPIRED

Geometrics and the design provide the Spike with greater performance and greater comfort during the ride.

Its design offers a great sense of responsiveness and the very small distance between the axles and the rider's centre of gravity means increased stability.

The design of the slightly higher head tube offers a more comfortable position

INTEGRATION

INTERNAL CABLING

Additionally, in the 2020 range, the cabling on the Spike is internal, the welds are polished and it is equipped to incorporate mudguards and pannier racks to ensure a full range of options and maximum fun.

G8

FIGHT THE WIND

Speed is addictive. You can't get enough of it. The faster you can ride, the greater the desire to go even faster. Connecting to your handlebars in your most aerodynamic position and feeling how the wind goes from being your enemy to becoming your travelling companion.

The new G8 frame represents a step forwards in design, aerodynamics and performance.

AERODYNAMICS

The new G8 frame represents a new advance in terms of design, aerodynamics and performance.

Through computer analyses of the wind tunnel and fluid dynamics; the frame lines have been optimised for better air penetration and to achieve improved aerodynamics.

GEOMETRY AND CONSTRUCTION

OPTIMAL COMBINATION OF CARBON FIBRE

HCIM-Hollow Core Internal Moulding technology was used to obtain a light, rigid, sensitive and reactive frame

Monocoque frame technology that applies high pressure in the mould to reach the highest levels of compact material and eliminate inconsistent pressures in the frame that create bubbles and imperfections. Allows controlling and optimizing the thickness in different parts of the frame.

FLAT MOUNT SHIMANO

Rear triangle designed specifically to react to the new forces that intervene in disc braking

The incorporation of a 140 mm disc brake at the front and rear, with Shimano Flat Mount technology has been a fundamental difference in the design of the frame.

INTEGRATION

NEW REAR AND THRU-AXLE - NEW MIDDEN LEVERS LOCKS

It allows a clearance for a tyre width of up to 32 mm and is the optimal measurement for greater rigidity and safety, optimising the position of the brake

The 12 mm Thru Axle provides the optimal dimension for greater rigidity and safety. It optimizes the position of the disc brake. Moreover, tools are not needed if the cyclist has to disassemble the wheel.

SLOPING GEOMETRY

Narrower, shorter and asymmetrical stays for improved pedalling performance

The G8 geometry is the same as the G7 Disc sloping geometry, an elevated steering tube, short rear triangle with an altered seat tube that places the gravity centre much lower and allows optimal manoeuvrability. The narrower, shorter and asymmetric stays and the design of the rear brake has allowed us to achieve a much more sensitive and rigid rear that improves pedalling performance in the climbs.

ACR STEERING

The new G8 frame features the ACR system, which enables 100% internal cabling.

D12 BATTERY INCORPORATED INTO SEAT POST

Patented clip system

The electronic shifting battery is completely hidden located in the seat post, which allows the system to gain in aesthetics and functionality.

It is part of the BH Unique customisation programme

ULTRALIGHT

THE LIGHTEST TECHNOLOGY

One of the main goals was to optimise each watt applied by the rider in any situation, with this increase in power giving you the edge over your competitors.

Designed for high competition cycling, this is an ultralight, minimalist, reactive and sensitive frame. An agile bicycle that favours precise changes of rhythm, curves at maximum speed, explosiveness and its great rigidness transforms all the energy of each pedal stroke into power.

ULTRALIGHT

The new Ultralight Evo frame has been redesigned by BH's R&D team, optimising the shapes of the tubes and maintaining the low weight and geometry characteristic of Ultralight frames. It also features the innovative full cable integration system.

This frame has been approved by the UCI for use in the best and most demanding competitions in the UCI World Tour.

GEOMETRY AND CONSTRUCTION

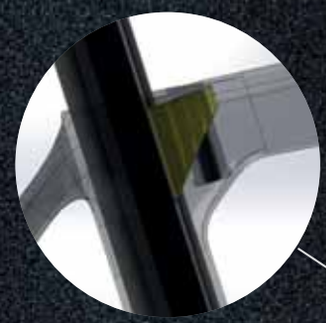
750 GRAMS WEIGHT*

Internal moulding and high pressure to reach the highest levels of compact material and control the thickness of the tubes, even on the smallest sections, achieving **one of the highest stiffness to weight ratios available on the market.**

Linked with the technique used by BH during the construction of the frame -Hollow Core Internal Moulding-; internal hollowing out, high pressure to reach the highest level of compact material to eliminate inconsistent pressure and avoiding the appearance of bubbles and imperfections in the carbon.

27,2MM

The 27.2 mm seat post **features a new built-in locking system that adds overall stiffness and functionality.** The integrated wedge system ensures proper grip without requiring high tightening torques.



27,2 MM

THRU AXLE 12 MM

SEMI-SLOPING GEOMETRY

BB386 EVO - 86.5 MM OPTIMISED

Greater rigidity and diameter without increasing the weight

It incorporates the BB386 Bottom bracket, a BH standard, where the width increase of the mentioned bottom bracket to 86.5 mm provides greater rigidness and allows greater diameter of the tubes coming from it without any increase of its weight.

NEW REAR COMPACT STAY

The rear triangle is composed of a single piece of carbon that has been designed with specific seat stays **that reactively transfer the cyclist's pedalling power and minimise the force exerted during disc braking in extreme situations.**

ACR STEERING

The new Ultralight Evo frame features the ACR system, which enables 100% internal cabling, where aesthetics and functionality are combined, **further improving the aerodynamics of the frame and fork set.**

MIDDEN LEVERS LOCKS

The 12 mm Thru Axle provides the optimal dimension for greater rigidity and safety. It optimizes the position of the disc brake. Moreover, tools are not needed if the cyclist has to disassemble the wheel.

RS1

AERO PERFORMANCE

Having the aerodynamics on your side helps you to make the most of your effort. It doesn't matter if you are competing, riding on your favourite route, improving your time in your favourite segment or simply enjoying your favourite road.You are battling with the wind with every turn of your pedals. A battle you will no longer have to fight, so you can start enjoying yourself. Only cyclists know that feeling of performance, power and efficiency that we achieve when body and machine are working at 100%. The addiction to speed.

GEOMETRY AND CONSTRUCTION

CONSTRUCTION: MONOCOQUE CARBON

As in all BH carbon frames, Hollow Core Internal Moulding (HCIM) technology was used in the RS1 to achieve a frame that would meet the lightness and stiffness goals set.

"Technology for monocoque frames that applies high pressure in the mould to achieve the highest levels of compact material and eliminate inconsistent pressures in the frame that create bubbles and imperfections. It allows optimal thicknesses to be controlled and optimised in the different key areas of the frame"

KAMM TAIL SHAPES

The RS1, just like our aero G8 bike, incorporates the Kamm Tail design in its tubes to achieve a completely aerodynamic cross section.

Computer and fluid dynamic analyses have been carried out that have shown that the RS1 has the same aerodynamic values as our aero G8 bike.

AERO SHAPES

The aero seat post of the RS1 has the same shapes as our aero G8 bike and its lock has been built into the diagonal tube to ensure minimal impact on the aerodynamics of the upper tube.

With the aim of adapting to all cyclists, from high-performance cyclists to those seeking greater comfort, the aero seat post of the RS1 is optionally available with a 15 mm setback, in our accessories and components section.

RIGID AND REACTIVE

The bottom bracket box, with the BB386EVO system, is oversized by up to 86 mm in diameter, increasing the diameter of the lower diagonal tubes by up to 80 mm, which reduces the thickness of the tubes and increases the torsional and rear stiffness.

The RS1's chainstays are very short, in order to achieve a very reactive bike that converts your pedalling into power watts.

The RS1's rear axle combines all the properties of a highly reactive bike; a short rear axle and aerodynamics that make it stand out from the other Gran Fondo models on the market.

The result is ultimate lateral stiffness, total stability and complete efficiency in terms of watts during pedalling.

INTEGRATION

COMPLETELY INTERNAL CABLING

The new RS1 frame features the ACR system, allowing 100% internal cabling for a clean and cable-free frame.

QUICK LEVERS THAT ARE EASY TO USE

All BH road frames feature 12 mm thru-axle fasteners that have the quick lever completely hidden; it is also easy to use and does not require the use of any tools.

It is part of the BH Unique customisation programme

AEROLIGHT

AERODYNAMIC COMES TO LIFE

The Aerolight Disc bike is the new BH bike for top-level competition triathletes.

The front triangle has been completely redesigned for better wind penetration, maintaining the Kamm-Tail for a clean and flat surface. The rear chainstays are stiffer and lighter, aiming for maximum reactivity to the pedalling.

KAMM-TAIL

AEROLIGHT

GEOMETRY AND CONSTRUCTION

OPTIMAL COMBINATION OF CARBON FIBRE TORAY - T800 Y T500

HCIM-Hollow Core Internal Moulding technology was used to obtain a light, rigid, sensitive and reactive frame

When designing the Aerolight Disc, the aim was to achieve an ultralight, rigid, sensitive and reactive frame. The previous design and development of the Aerolight Disc has allowed incorporating a combination of carbon fibres and resins that are the essence of the new generation of BH frames.

BB386 EVO

Maximizing rigidity and resistance

BH oversized the bottom bracket in order to incorporate the BB386EVO system, which ensures greater torsional stiffness and increased rider efficiency. This innovative design allows the width of the external bottom bracket to be increased to 86.5 mm, providing greater flexibility to produce a superior frame design.

REDESIGNED REAR AND 12MM THRU-AXLE

It allows a clearance for a tyre width of up to 30 mm and is the optimal measurement for greater rigidity and safety, optimising the position of the brake

The 12 mm thru-axle provides increased stiffness and safety. It optimises the position of the disc brake. And it doesn't require tools if the cyclist needs to remove the wheel.

FULL CARBON FORK

The Full Carbon fork allows an extra passageway for air to flow between the wheel and the frame without producing any kind of turbulence.

FLAT MOUNT SHIMANO

Rear triangle designed specifically to react to the new forces that intervene in disc braking.

INTEGRATION

ACR STEERING

The new Aerolight Disc frame features the ACR system, which enables 100% internal cabling.

DI2 INTEGRATED

In the steering tube

The headtube interior has been adapted to incorporate a Di2 battery without it being visible from the outside.

The battery of the electronic shifting system is fully housed and hidden. This is achieved through a patented “clip” system. It is discreet, light, insulated from humidity and easy to install.

It is part of the BH Unique customisation programme

GRAVEL X

XPERIENCE

THE FREEDOM

GravelX bikes are synonymous with having experiences and fun.

They are the perfect travel companions because they provide the confidence and safety necessary to cover long distances across the most varied terrains; from roads to open and forest tracks, where you can enjoy gravel cycling. The main features pursued by BH Bikes' R&D team for the GravelX bike were; low weight, stiffness, response behaviour and reactivity.

GRAVELX

The aim when designing the GRAVELX Carbon was; to develop a very light bicycle that provided a high level of fun, inspired confidence, safety and with which long distances could be covered across the most varied terrains.

In a nutshell, this frame represents the perfect companion for your every adventure. The bike is suitable regardless of whether you enjoy cycling on gravel, tarmac or off road and is ideal for both trails and wide tracks. The GRAVELX Carbon allows you to get away from the traffic whilst still offering that feeling that you're cycling at full speed or simply allows you to lose yourself along your routes as you take in the landscape around you.

GEOMETRY AND CONSTRUCTION

OPTIMAL COMBINATION OF CARBON FIBRE TORAY - T800 Y T500

HCIM-Hollow Core Internal Moulding technology was used to obtain a light, rigid, sensitive and reactive frame

When designing the GRAVELX Carbon, the aim was to achieve an ultralight, rigid, sensitive and reactive frame. The previous design and development of the Ultralight Evo has allowed incorporating a combination of carbon fibres and resins that are the essence of the new generation of BH frames.

FLAT MOUNT SHIMANO

Rear triangle designed specifically to react to the new forces that intervene in disc braking

The incorporation of a 140mm/160mm Rotor disc brake at the front and rear, with Shimano Flat Mount technology has been a fundamental difference in the design of the frame.

NEW REAR AND 12 MM THRU-AXLE

Clearance for a tyre width of up to 40 mm; the optimal measurement for greater rigidity and safety, optimising the position of the brake

Both wheels boast 12 mm thru axles to provide the whole frame with greater stiffness and security, combining perfectly with the GRAVELX Carbon's disk brakes.

GEOMETRY DESIGNED FOR LONG DISTANCES

Riding comfort and stability, high steering tube and large distance between axles

The geometry of the GRAVELX Carbon is designed for the rider to spend many hours in the saddle, with comfort and riding stability afforded priority. These qualities are achieved as a result of the bike's high steering stem, a compact sloping top tube and its long wheelbase.

INTEGRATION

D12 BATTERY INCORPORATED INTO SEAT POST

Patented clip system

The electronic shifting battery is completely hidden located in the seat post, which allows the system to gain in aesthetics and functionality.

It is part of the BH Unique customisation programme

RXTEAM

CICLOCROSS

When we develop our BH cyclocross bikes, we have our mind set on the competition and on what the cyclists of this discipline demand from their sea machine whatever the terrain or the conditions that will be found along the circuit. Mud, rain, dust are all part of cyclocross and are reflected on our bikes.

RX TEAM

PROFESSIONAL

BH designed and manufactured the new RX Team Evo frame with collaboration and input from some of the most famous, experienced and demanding cyclo-cross riders in Europe. The frame also incorporates the best design ideas that BH has already implemented and integrated into its top-level frames.

GEOMETRY AND CONSTRUCTION

100% MONOCOQUE CARBON

High, Medium and Low Module to achieve the highest standards of quality

The arrangement of the carbon fibre layup in the RX frame follows the same principles and concepts as those developed for the Ultralight frame, using a proprietary blend of high, medium and low modulus carbon to achieve the highest quality standards that BH and its riders require from all their frames.

OVERSIZED FORK

1.5” to optimise rigidity and enhance precision

This completely new tapered 1.5 inch fork optimises torsional stiffness while providing the necessary precision in the headset, to prevent noise and vibration while braking. This combined with added tire clearance make for an unbeatable combination.

THRU AXLE 12 MM

For greater rigidity and safety and to optimise the position of the disc brake

The 12 mm thru-axle provides increased stiffness and safety and optimises the position of the disc brake. And you do not need tools to remove the wheel.

FLAT MOUNT BRAKE DISCS

Allows easy adjustment of the rear triangle

The standard Shimano Flat Mount is lightweight, aerodynamic and is integrated into the frame without any need for adaptors or visible screws. It allows easy adjustment, including on the rear triangle.

BB386 EVO

Its width of 86.5 mm increases the torsional and rear rigidity of the frame

The RX Team Evo frame has been designed around the new BB386EVO bottom bracket system which allows the use of an 86.5 mm shell. Increasing the surface of the shell, means you also greatly increase its torsional rigidity, strength, and the cyclist’s efficiency during a ride or a race.

INTEGRATION

DI2 INTEGRATED

In the 31.6 mm seatpost

The seatpost interior has been adapted to incorporate a Di2 battery without it being visible from the outside.

FOLDING BIKE

You can take it wherever you want, you can travel with it by train, plane, ship, underground or bus, and you can keep it in the cupboard at home, in the office or in the boot of the car.
They are light and ergonomic because the design of the seat and the handlebars adjust to all heights.
